

Proposal Milestone 3: Methods Sketch

Due: Thursday, November 19 at 11:59 PM

Value: 50 points

Format: Replication project milestone

Purpose

Translate the research question into an ethical, reproducible experimental plan.

Your task

- Specify design, independent and dependent variables, assignment procedure, inclusion criteria, and a feasible target sample.
- Write participant instructions and list every stimulus or trial type needed to reproduce the task.
- Create a procedure timeline from consent through debriefing and identify two potential confounds with controls.
- State the planned comparison and predicted pattern in plain language; no inferential statistics are required.

Submit

- Three-page maximum PDF methods sketch.
- One-page appendix containing participant-facing instructions or sample stimuli.

Grading criteria

Criterion	Pts	Full-credit evidence
Operationalization	14	Variables and measures answer the stated question.
Reproducibility	12	Materials, instructions, timing, and sequence are sufficiently specific.
Controls and validity	10	Anticipates plausible confounds and uses appropriate controls.
Ethics and feasibility	8	Minimizes risk and fits the available population and time.
Planned inference	6	Prediction and comparison match the design.

Submission standards

Upload a readable PDF unless the handout specifies another format. Include your name, course code, and assignment title. Cite borrowed ideas and retain the editable source file. The learning portal timestamp is the official submission time.
