

# Applied Cognition Note 7: Metacognition

Due: Tuesday, December 1 at 11:59 PM

Value: 15 points

Format: 500-700 word analysis

## Purpose

Compare confidence with actual learning and identify one cue that produces misleading judgments of learning.

## Your task

- Study twelve unfamiliar concept pairs. After each pair, predict later recall from 0-100%.
- Take a delayed cued-recall test at least six hours later and score each item correct or incorrect.
- Calculate mean confidence, percent correct, and calibration error (confidence minus accuracy).
- Compare confidence for fluent versus difficult items and propose a study decision based on performance rather than fluency alone.

## Submit

- One PDF with item-level prediction/test table, calculations, and analysis.

## Grading criteria

| Criterion               | Pts | Full-credit evidence                                                         |
|-------------------------|-----|------------------------------------------------------------------------------|
| Accurate concept        | 4   | Uses the assigned cognitive concept accurately and precisely.                |
| Concrete evidence       | 4   | Documents specific observations or examples rather than general impressions. |
| Analysis                | 5   | Connects evidence to a defensible explanation and acknowledges a limitation. |
| Clarity and attribution | 2   | Meets length, organization, and citation expectations.                       |

## Submission standards

Upload a readable PDF unless the handout specifies another format. Include your name, course code, and assignment title. Cite borrowed ideas and retain the editable source file. The learning portal timestamp is the official submission time.
